

Infant and Early Mental Health Competencies Checklist

FOUNDATION: Knowledge and Skills

Child Development

Kno	wledge	Skills
	Typical development from preconception to five years of age	☐ Recognize typical development through observations
	Developmental theories of infant and early childhood development	☐ Identify when development is not progressing as expected and respond
	Key developmental theories and constructs: o Attachment o Resilience	 Recognize individual characteristics of the child ar caregiver(s) (e.g. temperament, adult mental healt which may contribute, positively or negatively, to development
	TemperamentEmotional and attention regulation	 Support healthy development from a strengths- based perspective
	o Emotional expression of a child Developmental domains: gross motor, fine motor,	 Promote parent/caregiver-child interactions that supports healthy development
	communication, personal, social, emotional, problem solving/cognition	☐ Promote healthy relationships☐ Recognize risks to healthy development
	Social-emotional behavioural areas: self-regulation, compliance, affect, social interaction, autonomy, social communication, adaptive functioning	☐ Clearly communicate specifically about child development
	Connection between development and mental health and how primary relationships drive	 Clearly communicate about developmentally appropriate behavior
	development	☐ Provide mentorship and guidance

Brain Development

Kno	owledge	Ski	lls	gr tomil Caroling Child
	Critical periods and the significance of brain development during the prenatal, infancy, and toddlerhood stages		Promote and model positive serve and return interactions between child and parent/	Foundation for Interface Cony Childhood Mental Health Fix - Cool in September 1 - A Fixed Cony Childhood Mental Health Fixed Cony Childhood Cony Childhood Cony Childhood Cony Childhood Cony Childhood Cony Childhood Con
	Executive functioning	_	caregiver that support optimal br	-
	Development of resilience	Ц	Promote interactions that strengt connections	then neural

Community

Coi	mmunity		
Kno	owledge	Ski	lls
	Have an awareness of community resources, services and programs Understand the roles and capacities of other practitioners Understand one's scope of practice Understand the impact of systemic barriers for children and families		Provide support to access services and programs when needed Engage in cross-sector collaboration and communication Share knowledge and resources with families Support families in transitioning between services Engage and collaborate with other professionals Translate knowledge for others Use agency to provide services which align with
			capacity
	vocacy	CI-	II
	owledge	Ski	
Ц	Interpret key messages around infant and early childhood mental health	Ш	Share knowledge to increase public awareness about infant and early childhood mental health
	Understand the benefits of prevention and early intervention efforts with key stakeholders		Share key messages about infant and early childhood mental health
	Recognize the importance of sharing knowledge about infant and early childhood mental health		Share the benefits of prevention and early intervention efforts with key stakeholders
			Advocate on behalf of vulnerable children and families
			Identify and reflect on systemic barriers in service delivery, gaps, and how to address them
			Advocate for better systems and services that support early well-being from an evidence-informed position
Cul	tural Humility		
Kno	owledge	Ski	lls
	Understand principles of equity		Work with and learn about the child within the
	Understand rights-based framework		context of their family and culture
	Understand cultural safety		Recognize one's own power, privilege, limitations,
	Understand culturally informed practices		biases and attitudes when working with others and their culture and values
	Recognize concepts of privilege, colonialism, racism and oppression		Engage in ongoing learning of a family's culture
	Understand the important role of culture in a child's sense of self in the community		Support families in creating a safe community while maintaining their own cultural identity
	Understand a child's development in the context of a family's culture		Engage in ongoing learning and self-reflection to increase cultural proficiency with families
	a ranning o ouncaro		Engage in ongoing learning and implementation of Anti-Oppressive Practice

Recognition of Evidence-Informed Practices

☐ Anti-oppression, anti-racism, anti-colonial

from a cultural perspective

approaches to practice, and the historical context

•		CHIOCHENIO CHIOCHENIO			
Knowledge	S	Skills			
 □ Understanding and interpretation □ Science and research support mental health □ Evidence-informed and evidence How research can inform on the control of the co	porting infant and early dence-based practices	Apply the science and research within scope of practice to support infant and early childhood mental health Use evidence-informed and evidence-based practices within scope of practice to support infant and early childhood mental health			
Frauma-Informed Care	rauma-Informed Care				
Knowledge	S	kills			
☐ Understand how parent/ca neglect, trauma, and/or un childhood, adverse childhoo intergenerational trauma ca development	resolved loss from od experiences, and	 □ Integrate trauma informed knowledge in the work with children and families □ Be able to interpret behaviours as having multiple meanings 			
☐ Understand how the caregi key to buffering traumatic eand young children		Practice from an anti-oppression, anti-racism, anti-colonial perspective			

PROMOTION: Knowledge and Skills

All Foundational Knowledge and Skills are required, in addition to the following:

Nurturing Development

Knowledge		Skills			
	Scaffolding of child development over time		Recognize and respond to child's individual		
	Importance of play for young children's development		characteristics such as temperamental differences and know how to adjust the approach with child and		
	Child characteristics and how they can influence development and the quality of their relationships		parent		
	Understand how positive or adverse interactions and experiences influence brain development and overall well-being	Ц	Observe how a child stress responds to stress, how a parent responds to the child and provide information to parent/caregivers how stress can impact the child's development		
			Educate, support, model how parent/caregiver can be responsive to the child's stress		
			Employ a strengths-based, non-judgmental approach		
Far	mily Engagement				
Kno	owledge	Skil	lls		
	Adult learning principles How relationships and regulation are interrelated		Promote the parent/caregiver and family as the experts on their child		
	Strategies to empower children and families		Confidently engage in conversations with families about their child's development		
			Support the parents/caregivers in recognizing their child's cues		
			Engage and motivate families		
			Build parenting capacities		
			Connect families to community supports and resources		
			Plan, develop, and implement parent/caregiver education (in individual and group settings)		
			Employ a variety of techniques to facilitate positive parent/caregiver-child interactions		
Inte	erdisciplinary Practice				
Kno	owledge	Skil	lls		
	Community services, programs, and various disciplines that support child development		Assessment of child and family needs		
	Service pathways	Ц	Initiate, engage and maintain cross-discipline and sector partnerships		
	Cross-sectoral, multi-professional collaboration		Coordination and collaboration on behalf of families to connect with the most appropriate service and program		
			Strong oral and written communication skills		

PREVENTION: Knowledge and Skills

All Foundational Knowledge and Skills are required, in addition to the following:

Foundation for infant and Early Childhood Mental Health Fractice - Child Development and Control Childhood Mental Health Fractice - Infant Childhood Mental Health Fractice - Child Development Fraction - Project Fraction - Advaccey - Infant Childhood Mental Health Fractice - Child Development Fraction - Project Fraction - Project

Supporting Developmental Vulnerability

nno	owieage	SKI	IIS
	Understanding the importance of collaborating with other professionals to see the whole child		Collaborate with other professionals to develop a wholistic understanding of child
	Strengths and limitations of screening and assessment tools		Observe the parent/caregiver-child relationship to mitigate risk factors and leverage protective factors
			Observe, screen, and monitor child development (gross motor, fine motor, cognitive, language, and social-emotional)
			Interpret the child's behaviour/challenges with an understanding of brain development
			Appropriately include families in screening processes
			Use a family-centered approach to guide and support the parent/caregiver-child relationship and the child's development in the context of their culture
			Refer to and follow up with families about health, cognitive, language, and social-emotional risks
Und	derstanding Developmental Profiles		
Kno	owledge	Skil	lls
	Differences in typical and atypical development and behaviours		Discriminate between typical and atypical development and behaviours
	Risk and protective factors that influence behaviour and development		Communicate with families when there is a concern about their child's development
	Appropriate services and resources to address identified needs		Recognize relationship patterns that are indicative of security
			Identify factors that may be affecting development and behaviours (i.e. medical concerns, circumstantial events, risk and protective factors)

Trauma-Informed Practice

Knowledge		Skills		
	How trauma and adversity can impact a child's development and well-being across the lifespan The pathways to immediate services and resources		Support parents/caregivers in responding to their child's distress	
	to support families in crisis Recognize when a child and family are in crisis		Communicating how adverse life experiences can impact a child's development and well-being Provide sensitive and informed responses to	
		Ц	families	
			Support the development of resiliency skills in children	
Cre	eating Pathways to Services and Supports			
Kno	owledge	Ski	lls	
	Service pathways and resources and services available in the community		Recognize when referrals to other professionals and services are needed	
			Identify and provide the appropriate level of support a family requires to engage in service/program/ pathway	
			Encourage and engage families to make appropriate referrals	
			Identify and provide appropriate interventions to address the needs of a family	
			Connect with appropriate service providers	
			Follow up with families when referrals are made	
			Reflect on how to improve programs and services to identify gaps in service provision	

EARLY INTERVENTION: Knowledge and Skills

All Foundational Knowledge and Skills are required, in addition to the following:

Theoretical Application

Kno	owledge	Ski	lls
	Theories that influence practice with children and families (e.g. child development, attachment,		Practice from an anti-oppression, anti-racism, anti-colonial perspective
	trauma-informed, psychodynamic, social support, cognitive behavioural, family and group dynamics, communication, cultural humility, and ecological and		Be able to inform on a child's development and behaviour and integrate into conversations
	systems theory)		Integrate familial cultural values into practice
	Theories, framework, and intervention models that help support early intervention		Select effective interventions and adapt practice methods to best suit the family based on their
	Anti-oppression, anti-racism, anti-colonial approaches to practice, and the historical context		unique needs while ensuring fidelity to the program design
	from a cultural perspective		Set the framework of the treatment
l ea	arning with the Child and Family		
	owledge	Ski	lls
	Importance of primary relationships and family history		Observe and assess interactions between the child and their parents/caregivers
	Efficacy and validity of screening, assessment and intervention tools		Gather information about the child and family through observations, screening results, family
	Strategies and tools to gather information about the		input, referrals, etc.
	child and family		Document the child and family history
	Recognizing rupture-repair sequences in relationships		Use validated tools to complete assessment Conduct developmental assessments
			Be able to respond in the moment to the parent/
		Ш	caregiver-child dynamic
			Interject to model positive behaviours
			Engage with and confer with service providers supporting the child and/or family, when appropriate
			Support and facilitate reparative relationships between the child and their parents/caregivers

Partnering with Parents/Caregivers and Children

Knc	owledge	Ski	Ils
	Personal skills and limitations, and those of other professionals		Engage both the child and their parents/caregivers
	Cultural importance and meaning of extended family		Engage in reflective practice
	Appropriate approaches to counselling and guidance		Leverage extended family and community support networks
	Approaches to intervening with the child and the family to mitigate risk factors and enhance		Build therapeutic relationships and alliances throughout interventions
	protective factors Interdisciplinary and trans-disciplinary models of		Set clear boundaries and expectations for intervention
	intervention, e.g. what other service providers are involved in the child's support system		Support parents/caregivers to problem solve and gain insight into personal issues (history, adverse childhood experiences)
			Provide support through quality interventions to address the mental health needs of all children
			Support parents/caregivers in working with their child on a developmental support plan
			Provide supportive counselling and guidance
			Provide parent/caregiver coaching and modelling
			Provide parent/caregiver groups (e.g. attachment focused, positive parenting focused, etc.)
For	mulation and Service Planning		
Ski	lls	F	follow up
	Integrate what is learned from the child and family		o Follow up with families on an ongoing basis
	into a formulation	,	o Provide feedback to parents/caregivers
	Include families in planning activities, supports, and resources when appropriate		o Engage in consultation with agencies and across disciplines when appropriate
	Create realistic goals for intervention with the child and family		o Make referrals for specialized assessments to appropriately trained professionals as needed
	Create developmental goals and strategies for the child with their family		o Provide service coordination with community
	Develop an integrated service plan reflective of the child, family, and environmental context		partners and other professionals in the child and family's circle of care
			o Check in with families and other sources for updated information (i.e. rescreening) when necessary
			o Review progress and reformulate plans

TREATMENT: Knowledge and Skills

All Foundational Knowledge and Skills are required, in addition to the following:

Assessment, Formulation and Diagnosis

Kno	owledge	Ski	lls				
	Context of developmental and/ or intergenerational trauma		Determine the parents/caregivers' (and others who are involved with the child) readiness to participate in services and treatment				
	Intersection of adult and child mental health		Use validated clinical assessments by trained individuals such as professionals, Elders, traditional healers, and knowledge keepers				
	Limitations of one's own biases and/or practice capabilities		Conduct observations and assessments to identify significant mental health and health challenges which may or may not lead to a diagnosis in				
	Cultural application of clinical assessments		the context of the parent/caregiver-child relationship and environment Engage and collaborate with professionals who can support and augment				
	Assessment and diagnostic tools, and their strengths and limitations		treatment plans to address the child's needs Reassess, on an ongoing basis, to adjust treatment and support parent/ caregiver engagement as necessary				
	Limitations of scope of practice and when other expertise or disciplines are required						
The	rapeutic Approaches						
Kno	wledge	Skills					
	Understanding a variety of		Application of trauma-informed interventions				
	therapeutic approaches that can be tailored to the needs of the child and their family, and within one's scope of practice		Support parents/caregivers to cope and reflect on unresolved issues that may interfere with caregiving abilities (e.g. parent psychotherapy, parent counselling)				
	within one s scope of practice		Provide individual or group therapy for parents/caregivers to reflect on their early experiences (e.g. for unresolved loss/trauma, mental health issues, substance abuse, violence)				
			Provide developmental therapy to enhance communication, cognition/ learning, social interaction, self-regulation (e.g. play therapy, intensive behavioural intervention, sensory-motor integration, speech and language therapy) in the context of the caregiving relationship				
			Provide dyadic or family interventions to enhance reciprocity, sensitivity, responsiveness, and attachment (e.g. family therapy, psychodynamic parent-infant psychotherapy, infant-led psychotherapy, interaction guidance or modified interaction guidance, behavioural interventions)				
Pla Ski	nning Ils						
	Ensure the parent/		Develop and monitor goals for treatment plans for the child and family
